

RALEIGH 5 CWT TRANSPORT

THE VAN

A revelation in economical transport. Suited to practically any class of trade this reliable, speedy and efficient vehicle will save you pounds. Interior fittings can be supplied to customers specification.

NINE DISTINCTIVE ADVANTAGES

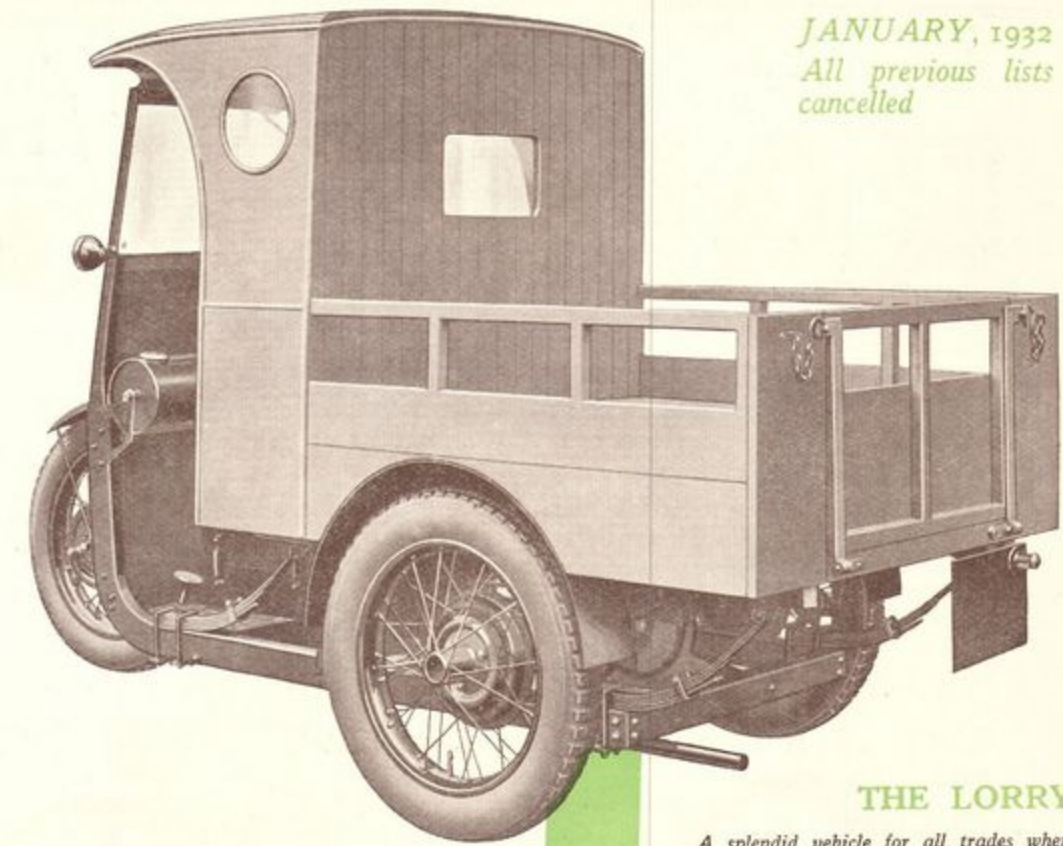

- 1 To-day, the cheapest 4-wheel van costs £110, yet the Raleigh, possessing greater capabilities, is obtainable for £78 15 0, an immediate and initial saving of more than £30.
- 2 Taxed at only £4, and fully insured for £7 10 0, it provides a further initial saving of nearly 50 per cent. as compared with a 4-wheel van. Here you have an example: For £14, two Raleighs can be placed on the road taxed and insured third party, yet the road tax alone for one 11.9 h.p. van is £15.
- 3 The spacious van of the Raleigh vehicle measuring 49 cubic feet is actually larger by 10 cubic feet than the average 4-wheel van of similar load capacity—a very distinctive feature when capacity, not weight, is your problem.
- 4 The petrol consumption of between fifty and sixty miles to the gallon, and oil consumption of approximately fifteen hundred miles to the gallon, compare more than favourably with a 4-wheel van of similar load capacity.
- 5 Compared with a 4-wheel van, maintenance costs are decidedly lower. Tyre wear especially is reduced, and repairs and replacements show a distinct saving. For example: The cost of regrounding the cylinders of a 4-cylinder engine and fitting new over-size pistons would be £7 to £8. The same work on the Raleigh would cost only £1 7 0.
- 6 Easy to handle in traffic, this van is simplicity itself to operate—a youth of sixteen years can obtain a licence, and drive it with entire confidence.
- 7 Will cover the same ground as a 4-wheel van at about half the cost, and is ideally suited to town delivery and short distance work, where customers are so placed that numerous stops and re-starts have to be made.
- 8 Possessing three forward speeds and reverse, it can be turned practically in its own length—a distinct advantage in narrow streets or lanes, and it is almost impossible to overturn.
- 9 It has the decided advantage of possessing an air-cooled engine, so that in severe winter weather, the risk of damage from frost is non-existent.

THE LORRY

A splendid vehicle for all trades where the load to be carried does not require overhead protection. With the addition of side extensions similar to those shown on the "Dual-Purpose" Lorry, it is an ideal vehicle for market-gardeners, small-holders, farmers, etc.

THE "DUAL-PURPOSE" LORRY

Illustrated above is another, but lower priced vehicle suitable for market-gardeners, small-holders, farmers, etc. The addition of the side extensions, supplied at an extra cost of 30/-—indicated in the illustration—makes it a useful means of transporting sheep, pigs, poultry, etc.

THE FACTORY TRUCK

Especially suited for internal transport, it has definitely proved itself the most efficient, economical and convenient method of transport yet devised for factory purposes. Various types of truck body can be supplied to customer's specification. Means are provided for attaching a trailer which, together with the truck, give a load capacity of 9 cwt.

THE BOX CARRIER

Illustrated above is an attractive, extremely efficient and economical vehicle for all classes of trade.
