

think!
180
miles per gallon

The
VILLIERS
CARBURETTER

... is as simple as the VILLIERS Engine. It is self-regulating and economical. It controls automatically the strength of the mixture at all times, seeing that the engine is never starved, nor yet choked with too much fuel. This Carburetter will suit all types of engines.

One rider writes us as follows:—

Witham, Essex.

“I should like to give my experience with a
 “1½ h.p. Villiers. I took delivery of the
 “machine on August 20th, 1925, and have ridden
 “every day, making a total of over 200 miles
 “per week. I have only been let down once
 “on the road during the whole of this time,
 “due to a broken chain. As for petrol con-
 “sumption, it is simply marvellous. *I have*
 “*never done less than 90 miles to the half-*
 “*gallon, which is 180 miles to the gallon.* I
 “contend that if people only realised the relia-
 “bility, economy and ease of control of these
 “little machines, there would be many more
 “on the road.”

G.M.

This is only one of many such letters on our files.
